- 5 VDC external power input (powered from AC or USB port)
- External power supply required
- Available in OEM version (without enclosure)

AirborneM2M enterprise wireless bridges and access routers are built for networking equipment in a wide array of machine to machine (M2M) applications. The compact form factor, integrated options and ease of use make it ideal for commercial enterprise environments.

Dual Band Wi-Fi

These AirborneM2M products establish wireless connections over both 2.4GHz and 5 GHz bands. Whenever the 2.4 GHz airspace is overcrowded with competing wireless transmission, AirborneM2M products can be switched over to the 5 GHz band to keep data flowing.

Enterprise Class Security

Security protocols are important to mission-critical wireless M2M applications. The AirborneM2M multi-layered security approach addresses the requirements of Enterprise-class networks and corporate IT departments. These advanced security features include wireless security (802.11i/WPA2 Enterprise); network security (EAP authentication and certificate support); communication security (SSH functionality and fully encrypted data tunnels); and device security (multi-level encryption capability to protect configuration data).

A 5 VDC external power source is required (see datasheet ordering table for more details, inclusions, ordering options).
